

Problem Statement	Impact	Comment
Data breach of T- mobiles - acquired personal details from customers	Stole the personal details of the customers so they decided to take legal actions against the company	Authorisation should be end to end encrypted.
Slack - New Feature receives backlash	The customers was not able to block the unimportant and harassing messages.	The analysis of the new feature should be done whether it creates any problem to the customers.
TikTok - followers count was reset to zero	For the people whose revenue was based on the followers count was affected.	Continuous and scheduled testing should be done.
Colonial Pipeline - Ransomware attack	Distrupted the fuel supply	Security testing should be given priority.
Toshiba becomes the victim of DarkSide	Darkside group had requested a ransom but toshiba didn't pay because they haven't confirmed any data leak.	Taking appropriate security measures is essential in order to avoid data leaks and security breaches.
Warzone - pulled their new feature due to glitch.	Many players had an unfair advantage over others because it caused the players to drop into matches that already equipped with the best weapons.	The company should have a rollback strategy prepared so that, if any issue arises, the feature can be temporarily disabled without disrupting gameplay.
NHS - The 4-hour outage of their application and website leaves the passengers stranded.	People could not board their flights as they could not prove their COVID vaccination status.	The company should have implemented backup servers to switch to a secondary infrastructure during an outage.
Tesla - recalled their 12,000 vehicles after discovering a glitch in its Full-Self Driving beta software.	Impacted customer trust and made Tesla to issue a large-scale recall, affecting around 12,000 vehicles.	Tesla should revise their testing protocols to ensure better detection of software glitches before public release.
Grand Theft Auto -GTA III, which was low-quality game full of bugs, glitches, and poor design decisions.	Players faced botched graphics, frame rate drops, and broken missions, making the game nearly unplayable.	The company should improv their QA testing to prevent similar bugs in future projects.

Log4j - software bug left millions of web servers to be vulnerable.	Since it is an open-source logging library which was used by many companies worldwide like Apple, Amazon, etc. their users were worried.	Use detection systems and network monitoring tools to identify suspicious activity or signs of exploitation.
