defect	description	Steps to reproduce	Environment setup	comments
Selecting several files in Explorer and opening them at once via ENTER key stroke could cause one or more files to be missing and not opened.	Select several files which are associated with Notepad++ in Explorer, then hit ENTER key or run **Open** via context menu, then some files may not be opened in Notepad++, or repeated files opened. Related issue	0. "Remember inaccessible files from past session" is eanabled & "ses" extension is associated with Notepad++. 1. Open file A. 2. Save session as SesA.ses. 3. Open file B. 4. Move B to the other view. 5. Save session as SesAB.ses. 6. Move B to the other view (-> A and B in one view on exit). 7. Close NPP. 8. Select the two user-sessions in File-Explorer and open them in one go.	In Notepad ++	This issue explains the difficulty in accessing multiple files at the same time. Resolving it can be helpful in ease of accessing the multiple files
Clipboard History text insertion does not respect current N++ tab line-ending type	Data inserted into a document from the *Clipboard History* panel does not have its line-ending types converted to the current documents line-ending type at the time of insertion, corrupting a document.	1. Set the line-ending type of a N++ tab to `Unix (LF)` ; observe in status bar:  Unix (LF) 2. Create some data of multiple lines, which will appear as follows (when visible line-endings turned on):  license.txt new 2 abcLF defLF ghiLF 3. Press Ctrl+a followed by Ctrl+c ; observe data has been remembered in the	In notepad ++	This defect can lead to formatting issues, making the document difficult to read and causing errors in processing. It's essential for the application to ensure that line-ending types are converted to match the current document's format upon insertion.

		Clipboard History:  Clipboard History abcdefghi 4. Change line-ending type of the document to `Windows (CR LF)` ; observe in status bar:  Windows (CR LF) 5. Observe data in tab now appears like this (when visible line-endings turned on):  license.txt new 2 1 abc CR LF 2 def CR LF 3 ghi CR LF 4 6. Move caret to start of line 2. 7. Double-click on the `abcdefghi` entry in the *Clipboard History* panel to insert its data into the current document ; observe:  license.txt new 2 1 abc CR LF 2 abc LF 3 def LF 4 ghi LF 5 def CR LF 6 ghi CR LF		
Function List bash parser parse wrongly if file's EOL is UNIX	Function List bash parser parse wrongly if file's EOL is UNIX	1. Copy the content of https://github.com/notepad-plus-plus/notepad-plus-plus/blob/master/PowerEditor/Test/FunctionList/bash/unitTest then paste it to a new document of Notepad++ 2. set this new pasted document to Unix EOF, set	In notepad ++	This defect in Notepad++ can lead to incorrect parsing of functions, disrupting code readability and functionality. It's crucial for the parser to

		Language to `Shell` and launch FunctionList Panel. 3. Observe `setenv()` is not in the list. 4. set the document to Windows EOF, and reload FunctionList 5. `setenv()` is in the list.		correctly handle UNIX line endings to ensure accurate interpretation of the code.

CURRENT_LINE and CURRENT_COLUMN should be one-based not zero-based	To be user-useful, the `$(CURRENT_LINE)` and `$(CURRENT_COLUMN)` expansions offered in the *Run* menu's *Run... > The Program to Run* box should be "one-based" and not "zero-based".	1. In a Notepad++ tab, move your caret to line 1, column 1 (start of document)
		2. Invoke the *Run* menu's *Run...* command.
		3. Put this text in the input combobox underneath *The Program to Run* : `cmd /c echo CURRENT_LINE=$(CURRENT_LINE) CURRENT_COLUMN=$(CURRENT_COLUMN) && pause`:
		 Run...
		The Program to Run
		cmd /c echo CURRENT_LINE=$(CURR
		...
		Run
		Save...
		Cancel
		4. Press the `Run` button.
		Expected Behavior
		A CMD window opens with `CURRENT_LINE=1 CURRENT_COLUMN=1` in it.
		Actual Behavior
		A CMD window opens with `CURRENT_LINE=0 CURRENT_COLUMN=0` in it:
				`CURRENT_LINE=0 CURRENT_COLUMN=0`
		`Press any key to continue . . .`
		The line and column data is always "one less" than it should be, for any line and any column the caret is on.
			In Notepad ++	This defect can confuse users, as many expect line and column numbers to start at 1, aligning with common conventions in text editing. Adjusting the expansions to be one-based would enhance usability and improve user experience.

Function list display corruption multiple monitors	With two monitors, attempting to dock the function list by dragging results in corruption of the display until the drag ends. The function list then ends up in an unexpected location. The outline of the list doesn't follow the mouse properly.	1. Connect two monitors 2. Drag the function list around.	In Notepad ++	This defect interrupts user experience by causing visual corruption and disorientation during the docking process, making it difficult to place the function list accurately. Improving the drag-and-drop functionality across multiple monitors would enhance usability and ensure a smoother interface interaction.
Find-in-Files recorded in macro with empty "Filters" box can't match any files	If a *Find in Files* search is done interactively with the *Filters* box left blank, hits from the search can result. However, if the same search is recorded into a macro, playback of the macro won't ever result in hits.	1. Start macro recording. 2. Conduct a *Find in Files* search with an empty *Filters* box (implied `*.*`) with other settings such that you know hits will result. Observe 1 or more hits. 3. End macro recording. 4. Play the macro. Observe `(0 hits in 0 files)`	In Notepad ++	This defect disrupts the functionality of macros, preventing users from effectively automating repetitive search tasks. Ensuring that recorded macros accurately replicate interactive search behaviors, including handling blank

				filters, would improve usability.
Notepad++ bug with document map scrollbar on multiple windows desktops	If I switch to another desktop on win 10 I can see the shadow of scrollbar in npp and if clicked on that I am back to npp.	1. open notepad++ with scrollbar document map on windows 10 2. leave it on desktop and switch to another desktop 3. click on shadow of scrollbar on another desktop	In Notepad ++	This defect can disrupt the user workflow. Fixing this issue would improve the application’s integration with Windows 10's desktop features and enhance overall user experience.
On Debug Build, Korean Input has Assert.	Assert is invoked because of the isdigit function called by the is isdgits function when entering Korean in the debug build.	1. Runs on a debug build. 2. Input Korean. 3. Assert is executed.	In Notepad ++	This defect indicates an assertion when processing Korean input, which disrupts the user experience. Properly validating input types and enhancing character encoding support would help resolve this issue
